DETAILED ACTION

Allowable Subject Matter

1. Claims 12, 14, 16, 18, 19 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Claims 12,14,16,18 and 19 are allowed because the prior art of record neither anticipates nor renders obvious the limitations of the base claims 12 and 18 that recite a solid state imaging apparatus particularly with wherein each of said plurality of light-transmitting films included in one of said pixels located in the center of the imaging area corresponds to a relative one of said plurality of light-transmitting films which is in a same relative position in one of said pixels located in the periphery of the imaging area wherein each of said plurality of light-transmitting films included in the one of said pixels located in the center of the imaging area has a line width different than a line width of the corresponding relative one of said plurality of light-transmitting films included in the one of said pixels located in the periphery of the imaging area in combination with other elements of the claims.

The dependent claims are allowable at least for the same reason.

Any comments considered necessary by applicant must be submitted no later than the payment of issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
 - US-2003/0071271: The invention teaches related solid state imaging apparatus yet fail to teach or suggest particularly with wherein each of said plurality of light-transmitting films included in one of said pixels located in the center of the imaging area corresponds to a relative one of said plurality of light-transmitting films which is in a same relative position in one of said pixels located in the periphery of the imaging area wherein each of said plurality of light-transmitting films included in the one of said pixels located in the center of the imaging area has a line width different than a line width of the corresponding relative one of said plurality of light-transmitting films included in the one of said pixels located in the periphery of the imaging area as in the claimed device.
